month ago, and as yet have received no answer. Is anything the matter with you?
I am getting on pretty in German, too straight along.
I suppose you'll be eating Eastern Shore oysters etc. while I am in Phila. Please remember me to all the Baltimore and Eastern Shore people.
I saw something in Schomberg's paper about two girls who were arrested in one of the mammoth stores etc.
I had some Fast Nacht Cakes over at "Billy." They are just like doughnuts.
I guess I will have to stop.
Love to all.

Spencer.
I was over at Billy Tolgi's Sunday, he said that the J.P.S. of Phila. will have
an anniversary and a big blowout generally.
I worked up in the lab extra on Monday
and when I asked Mr. Congdon if I could
be excused Friday, he said yes.
Tomorrow, Schumberg and myself go up
to Dr. Coppi to get excused from Chapel.
Dr. Coppi called me up this afternoon and
told me about his visit in Wash.
That is great about you joining the C.A.C.
Before I come home in March you must
propose my name for the privileges of
membership for a few days.
Jack Carman had his name proposed
this way and so at the Club all the
time he was home.
I saw Miss Richardson yesterday in
labb and had a nice talk with her.
I wrote to Mr. Cleane a letter about a
then make your report on it. After you have done this, if they are all right, you commence on another group.

We have 23 elements which are divided into 5 groups by certain reagents.

HCl precipitates the first group.

H₂S, the second, (NH₄)₂S, the third, and (NH₄)CO₃ the fourth. and leaves the fifth in solution.

Then we take up the solids, acids, and bases and that finishes the course in qualitative.

We have commenced Algebra and so far I have had good luck. P. S. 10.

The Algebra is harder than trig but I think it better.

I am sorry mamma is sick. I am glad that Miss Pizzi is so much better.

Just now somebody knocked at the door and "Columbo Levi" as the boys call him came in. He wanted to know if I had any old clothes to sell.

The Hirshys wrote to Selouberg and asked him to come and bring me down with him.
Dear Papa,

I was very much pleased by your long and nice letter, and by your musical postscript.

I am getting our first rate in Chemistry. Today I got my preliminaries for my first and second groups finished, and tomorrow commence on my bottles.

The way Chem is taught is like this: you are required to perform certain experiments on the salt of each of the group as this takes some salt of 16. Add it to the following:

and write the reactions for it.

\[
\begin{align*}
+ \text{H}_2\text{O} &= ? \\
+ \text{NH}_4\text{OH} &= ? \\
+ \text{KOH} &= ? \\
+ \text{W}_2\text{CO}_3 &= ? \\
+ \text{H}_2\text{S} &= ? \\
+ \text{W}_4\text{H}_5 &= ? \\
+ \text{H} &= ? \\
\end{align*}
\]

After you do these your hand in six big bottles, which Mcloughlin fills with elements from the group you are working on. Then examine these bottles according to a scheme in the book and
